kept

Is your skincare actually working?

Kept turns a new product into a fair trial on your own face, measured with YouCam Skin AI.

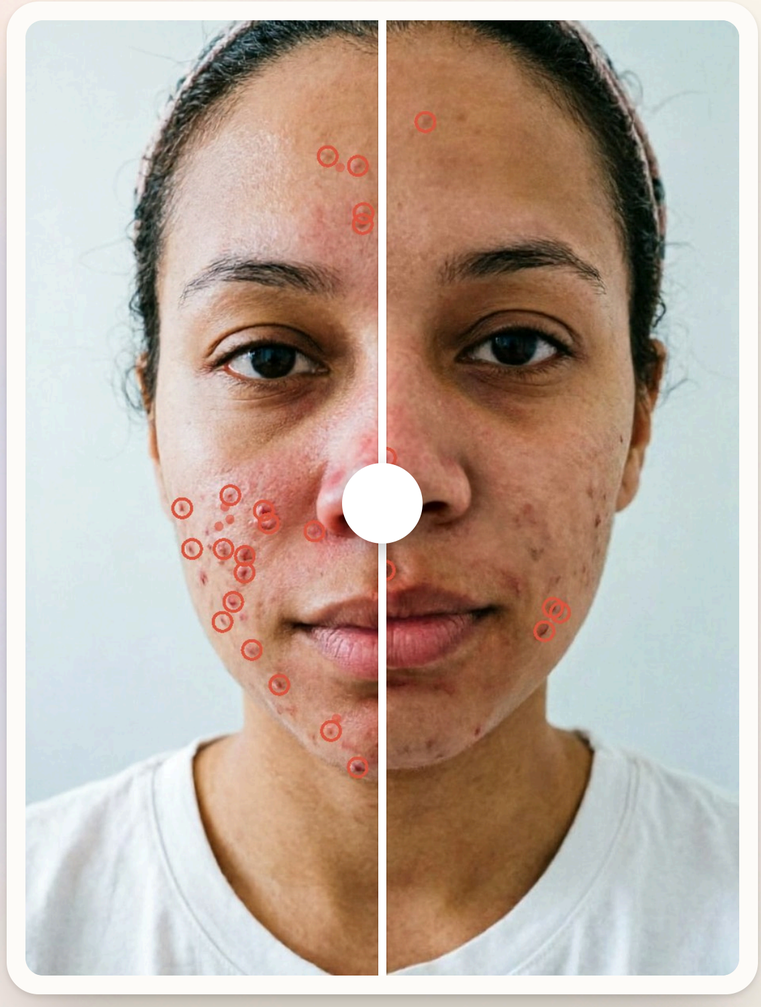

Your gallery can't tell you

Week three of a new serum and the chin looks worse. Is it failing, purging, or just a different lamp? Photos from other angles and lights can't answer that, so people drop products too early.

Illustration: the same sample photo with a different lamp, angle and distance. The outline is the day 0 framing Kept asks you to match.

A fair trial on your own face

49

blemishes on day 0

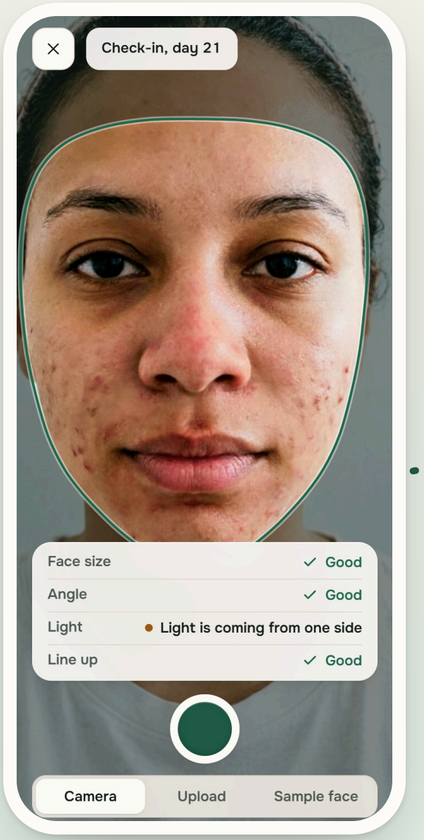

Working

11

on day 56

2% salicylic acid serum from the sample shelf. Rings are YouCam's acne map. Face generated with YouCam AI.

How a check-in works

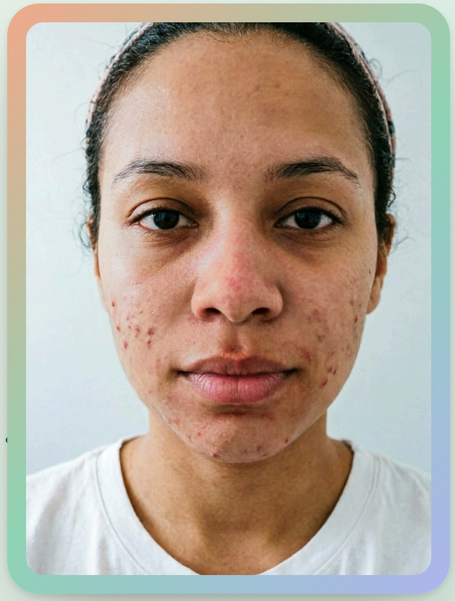

Camera guide

Face lined up with the day 0 outline

AI Skin Analysis

A score and a skin map for every area the trial watches

AI Skin Simulation

Your own face at the goal, scored as the target

Likely purging

72 → 66

acne on day 18, inside the retinal purge window

Verdict

Plain rules weigh the change against photo noise and the active's timeline

The active sets the trial

2% salicylic acid serum

Aqua, Propanediol, **Salicylic Acid**, Butylene Glycol, Ethylhexyl Salicylate, Sodium Hyaluronate, Glycerin, Panthenol, Allantoin, Phenoxyethanol

Salicylic acid found

Ethylhexyl salicylate is a sunscreen filter

56 days

Acne

Pores

Oiliness

Watching redness

Purge window, day 7 to 42

17 actives, each with its own onset day, full-effect day, purge window and irritation level. Check-ins on days 7, 14, 21, 28, 42 and 56, with a calendar file.

Three trials, three different answers

2% salicylic acid serum

56 of 56 days

Working

66 → 74

acne score, target 72. Blemishes 49 → 11.

0.05% retinal cream

day 18 of 84

Likely purging

72 → 66

acne on day 18, inside the purge window from day 14 to 42. Redness steady at 80.

10% niacinamide toner

56 of 56 days

Not doing enough

69 → 69

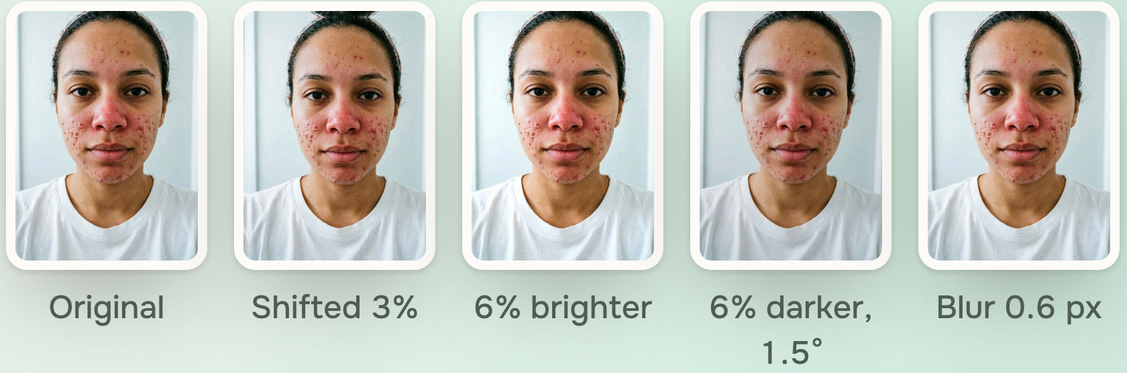

pores, every check-in within the ±4 photo noise

Sample shelf of the live app. Higher scores mean better skin. Face generated with YouCam AI, later photos simulated, every score from YouCam AI

±4

points between repeat photos

Five versions of one photo went through YouCam. The widest spread was 3.03 points, so a change has to beat 4 to count, and every reason in the app says so.

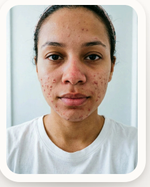

Limitation: variants of one generated photo, not repeat photos of a real person on different days.

Ask why, get your own numbers

Gemini 3.8 Flash through OpenRouter with four tools over the verdict engine: get_scores, compare_days, active_timeline, expected_at. It explains the verdict and never changes it, and sees photos only if you switch that on.

0.05% retinal cream

day 18 of 84

Likely purging

Blemishes 16 → 34

Ask about this trial

Why is my acne worse?

When will I see results?

Why is my acne worse?

✓ Checked acne scores
✓ Compared day 0 and day 18
✓ Looked up the retinal timeline

Your acne score dropped from **72** on day 0 to **66** on day 18, with blemish counts rising from **16 to 34**. Retinal often causes a short purge between days **14 and 42**. You are on day 21 of 84, so this fits the purge window. Take your day 21 check-in today.

Before you buy

Paste the ingredients of something you're about to order. Kept checks them against your own trials.

Think twice

Actives in Niacinamide 10% serum

Niacinamide | Ceramides and hydrators

Didn't work for you before

Niacinamide didn't change your pores or oiliness in 56 days

See trial
10% niacinamide toner

Not a problem for you

Your pores score 80, your oiliness scores 82 and your redness scores 80. This product targets things that aren't a problem for you

+ Start a trial with this product

SPF won't show in eight weeks

So Kept shows your face across the years with YouCam AI Aging Simulation.

Four YouCam APIs, each with one job

File API

POST /s2s/v2.0/file, then PUT to the presigned URL

Uploads every photo, only after the camera guide passes it

AI Skin Analysis

POST /s2s/v2.0/task/skin-analysis

Scores and skin maps on day 0 and at every check-in, only for the areas the trial needs

AI Skin Simulation

POST /s2s/v2.0/task/skin-simulation

The trial's target: your own face at the goal, analysed for a target score

AI Aging Simulation

POST /s2s/v2.0/task/aging

Sunscreen: your face across the years instead of an eight-week chart

A typical check-in costs 9 units. Photos that fail the camera checks are never uploaded, so they cost nothing.

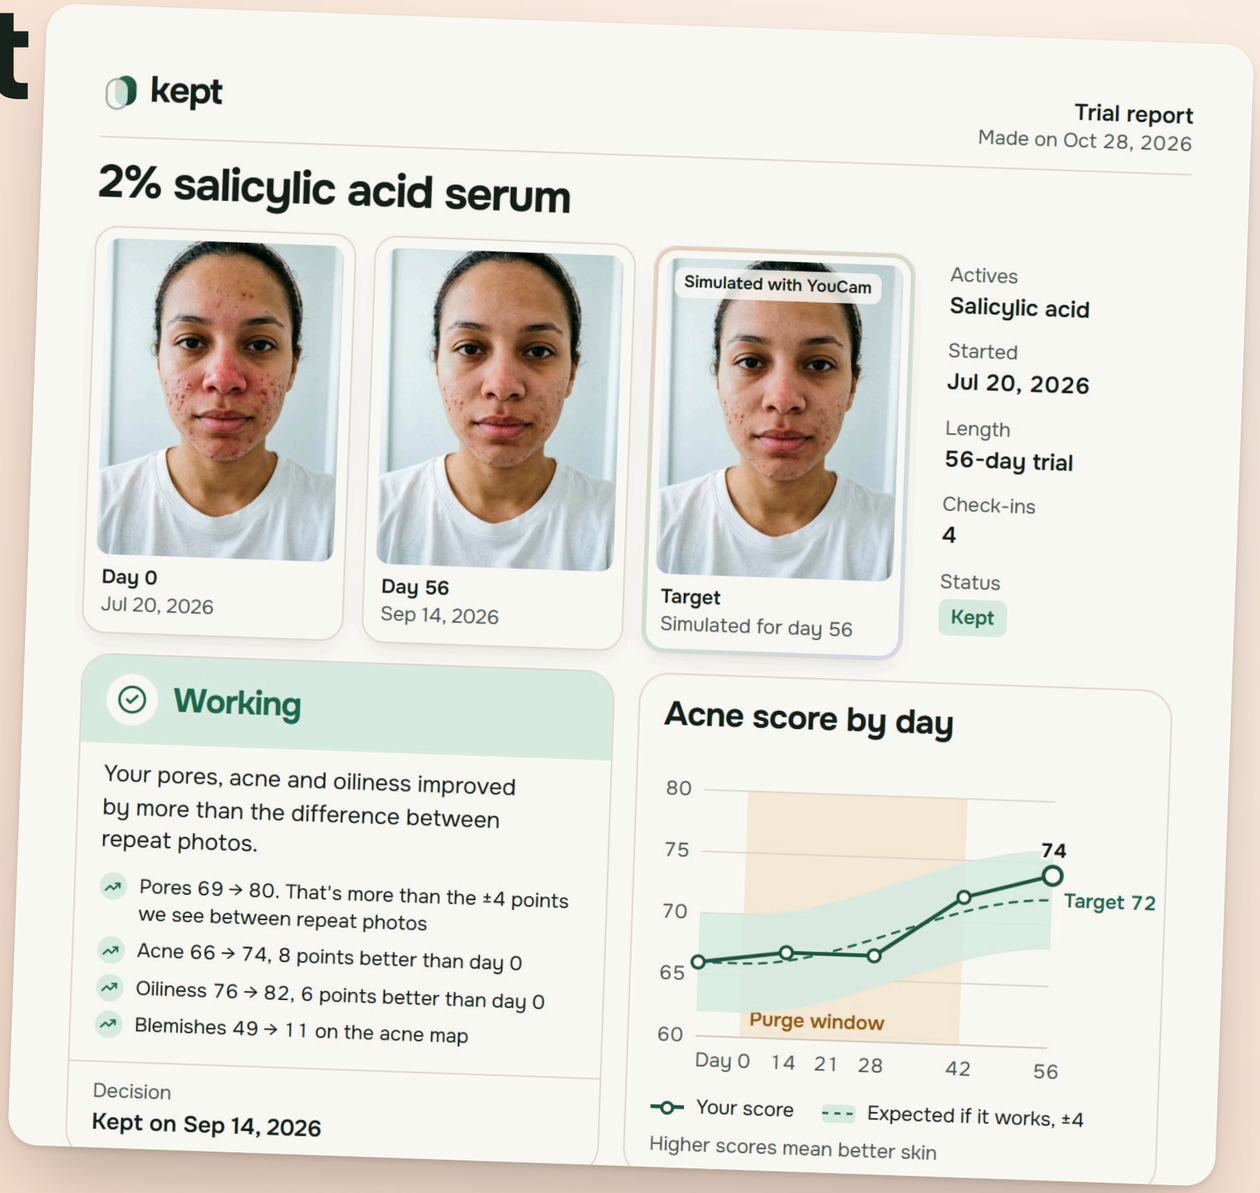

A reason not to quit in week two

Stores: trials after a purchase

Sold with the product, Kept gives the customer check-in dates and a verdict, so fewer people give up on a working product too early.

Brands: results or your money back

The one-page trial report shows what changed and by how much, from photos taken the same way every time.

What's next

Today		Next
±4 comes from five versions of one generated photo	→	**Volunteer repeat photos and a threshold per area**
One timeline per active	→	**Timelines by concentration, more actives**
A web app people open on their own	→	**An embeddable version for store order pages**
Trials live in one browser	→	**Sync, and a trial link for a dermatologist**
